

Cognitive CoachingSM Foundation Seminar

What is it?

Cognitive CoachingSM is a form of mediation that can be applied to professional interactions in a variety of settings and situations with the intention of enhancing self-directed learning. It is a composite of skills, strategies, maps, and tools as well as mental models and beliefs. It is also a model for classroom mediation to enhance students' self-directed learning. Research on Cognitive CoachingSM has linked its implementation to increased student achievement, greater teacher efficacy and satisfaction, higher levels of teacher cognition and professional, collaborative cultures. As a result of engaging in the Foundational Training, participants will develop understanding of three structured conversations for planning, reflecting, and problem-resolving. In addition, they will develop knowledge and skills for expanding teacher thinking.
